

BAKER BRISTOL PET HOSPITAL PRE-ANESTHETIC CONSENT FORM

PRE-ANESTHETIC BLOOD TESTING: Like you, our greatest concern is the well-being of your pet. Before putting your pet under anesthesia, we will perform a full physical examination. However, many conditions (including disorders of the liver, kidneys or blood) cannot be detected with a physical examination. Thus, we will be running blood testing prior to anesthesia unless it has already been done in the past 3 months. Our in-house laboratory will provide rapid results prior to the anesthetic procedure. We will call you to discuss any concerns before anesthesia is administered.

0-3 years of age: We recommend a CBC & mini chemistry blood profile **\$125.00**

>3 years of age: We recommend a CBC & full chemistry blood profile **\$155.00**

MICROCHIP IMPLANTATION: A HOME AGAIN microchip can be implanted at any time; however, the needle is large and it is painless to place it while your pet is already under anesthesia. Please indicate your choice below:

(initial) **YES**, I want my pet to be implanted with the HOME AGAIN microchip. **\$58.00**

(initial) **NO**, I decline to have my pet implanted with the HOME AGAIN microchip

CHEST X-RAY (PREANESTHESIA): Prior to anesthesia, it is safest to perform chest x-rays. These x-rays allow us to evaluate your pet's heart size and evidence of metastatic lung cancer, as well as other pathology. This test is recommended for all pets, but **STRONGLY** recommended for all pets over 10 years of age.

(initial) **YES**, I want x-rays. **\$195.00**

(initial) **NO**, I decline x-rays at this time

MISCELLANEOUS: We generally perform complimentary nail trims on all pets who are sedated or anesthetized. Please check any additional services you would like performed while your pet is under anesthesia:

Deep Ear Cleaning (\$45)

Express Anal Glands (\$35)

Flea medication: Does your pet currently take flea prevention medication? If not, would you like to take some home today? FYI If we find any live fleas on your pet, we will automatically administer a rapidly acting (but short acting!) dose of flea medication called Capstar (\$8-10 depending on weight).

Heartworm medication (dogs): Does your pet currently take heartworm prevention medication? If not, would you like to take home some today?
